SUMMARY

Senior Full-Stack Engineer specializing in developer platforms, cloud infrastructure, and agent-native systems. Experienced designing multi-tenant SaaS platforms, AI-powered developer tooling, cloud-native services, and internal engineering systems that improve developer productivity and accelerate delivery.

EXPERIENCE

Founding Engineer (Independent)

Aug 2026 – Present

Stations.dev

Building a multi-tenant work coordination platform where humans and autonomous agents securely execute shared workflows.

- Architected a multi-tenant SaaS platform spanning 7 services and 250+ REST endpoints behind a NestJS gateway using shared API contracts in an Nx monorepo.
- Designed shared human/agent workflows with common authorization, approval, leasing, and artifact requirements, enabling human-in-the-loop automation.
- Implemented multi-tenant authentication using JWT, OIDC, CASL, PostgreSQL RLS, service authentication, and enterprise SSO.
- Built AWS infrastructure with Kubernetes, OpenTofu, GitHub Actions, Docker, and OpenTelemetry.
- Delivered a Next.js web app, CLI, and MCP server over a shared public API.
- Established a specification-first AI engineering workflow spanning 34 design specs, 73 implementation plans, 248 merged PRs, and 2,500+ automated tests while maintaining open-source agent tooling.

Software Development Engineer II

Jun 2022 – Aug 2026

Amazon

Built AI workflow platforms, experimentation systems, cloud infrastructure, and developer tooling supporting autonomous and data-driven engineering workflows.

- Built an AWS Bedrock workflow platform enabling 100+ autonomous workflows with 600+ executions through a visual DAG editor.
- Developed features for an experimentation platform supporting 1,500+ production experiments.
- Built CLI tools, MCP servers, and developer workflows for local development, testing, and deployment.
- Built cloud infrastructure using AWS CDK.
- Automated CI/CD workflows for internal platforms.

Senior Software Engineer

Dec 2021 – Jun 2022

ActiveCampaign

Improved reliability and developer workflows for customer experience automation systems.

- Built a command-line data seeding tool that made production issues easier to reproduce in local development environments.

Cloud Engineering Chapter Lead

Mar 2020 – Dec 2021

Vanguard

Led cloud engineering enablement and migration of enterprise security gates and CI/CD workflows from Bitbucket and Bamboo to GitHub.

- Maintained enterprise CI/CD pipelines during the migration from Bitbucket and Bamboo to GitHub, minimizing disruption for development teams.
- Helped establish a chapter-based engineering organization focused on technical mentorship, shared practices, and cross-team knowledge transfer.
- Mentored engineers through regular coaching, technical guidance, and career development conversations.
- Fostered continuous learning through discussions on engineering best practices, platform trends, and emerging technologies.

Software Engineer

Sep 2017 – Mar 2020

Quicken Loans

Built deployment orchestration, infrastructure automation, and developer tooling for enterprise software delivery.

- Built and maintained infrastructure using Terraform and Terragrunt to support enterprise deployment workflows.
- Developed custom deployment targets and orchestration capabilities for CI/CD tooling to support varied application requirements.
- Built and maintained a shared repository of developer tools and automation scripts to improve engineering productivity and standardize workflows.
- Evaluated enterprise tooling through RFCs and architecture reviews, influencing build-versus-buy decisions for internal developer platforms.
- Mentored junior engineers on PHP, object-oriented design, agile development, and pair programming.

Senior Full Stack Software Engineer

Aug 2016 – Sep 2017

magicJack

Modernized customer-facing and internal service architecture across web, API, and order-processing systems.

- Designed and implemented a new API architecture to modernize internal services and improve separation between application components.
- Developed a shared library that enabled incremental migration from a monolithic architecture to microservices.

Software Engineer

Aug 2015 – Aug 2016

Bank of America

Built internal compliance software and reusable frontend components for enterprise applications.

- Developed reusable frontend libraries for data grids, state history, and loading experiences that became widely adopted across internal applications.

Software Developer

May 2014 – Aug 2015

Quicken Loans

Built mortgage servicing software while improving local development consistency and onboarding.

- Created and maintained a reproducible Vagrant-based development environment that standardized local setup and streamlined onboarding.

SKILLS

Platform Engineering

Developer platforms, Distributed systems, Multi-tenant SaaS, Service decomposition, Event-driven workflows, Transactional outbox, API gateways / BFF, RLS, Enterprise SSO, JWT / mTLS, RBAC, Signed webhooks

Cloud & DevOps	AWS, Kubernetes, OpenTofu, Terraform, AWS CDK, Docker, GitHub Actions, OpenTelemetry, CI/CD
AI Systems	AI agents, Multi-agent systems, Agent-native platforms, Human-in-the-loop, Bedrock, RAG, MCP
AI Engineering Workflow	Specification-driven engineering, Multi-agent development, AI-assisted code review, Implementation planning, Architecture-aware development, Agent skill libraries, Claude Code, Codex, Cursor
Backend	TypeScript, Node, NestJS, PostgreSQL, Go, Java, Redis, REST, gRPC
Frontend	React, Next.js, TypeScript, Tailwind, React Flow

LANGUAGES

English — Native speaker
